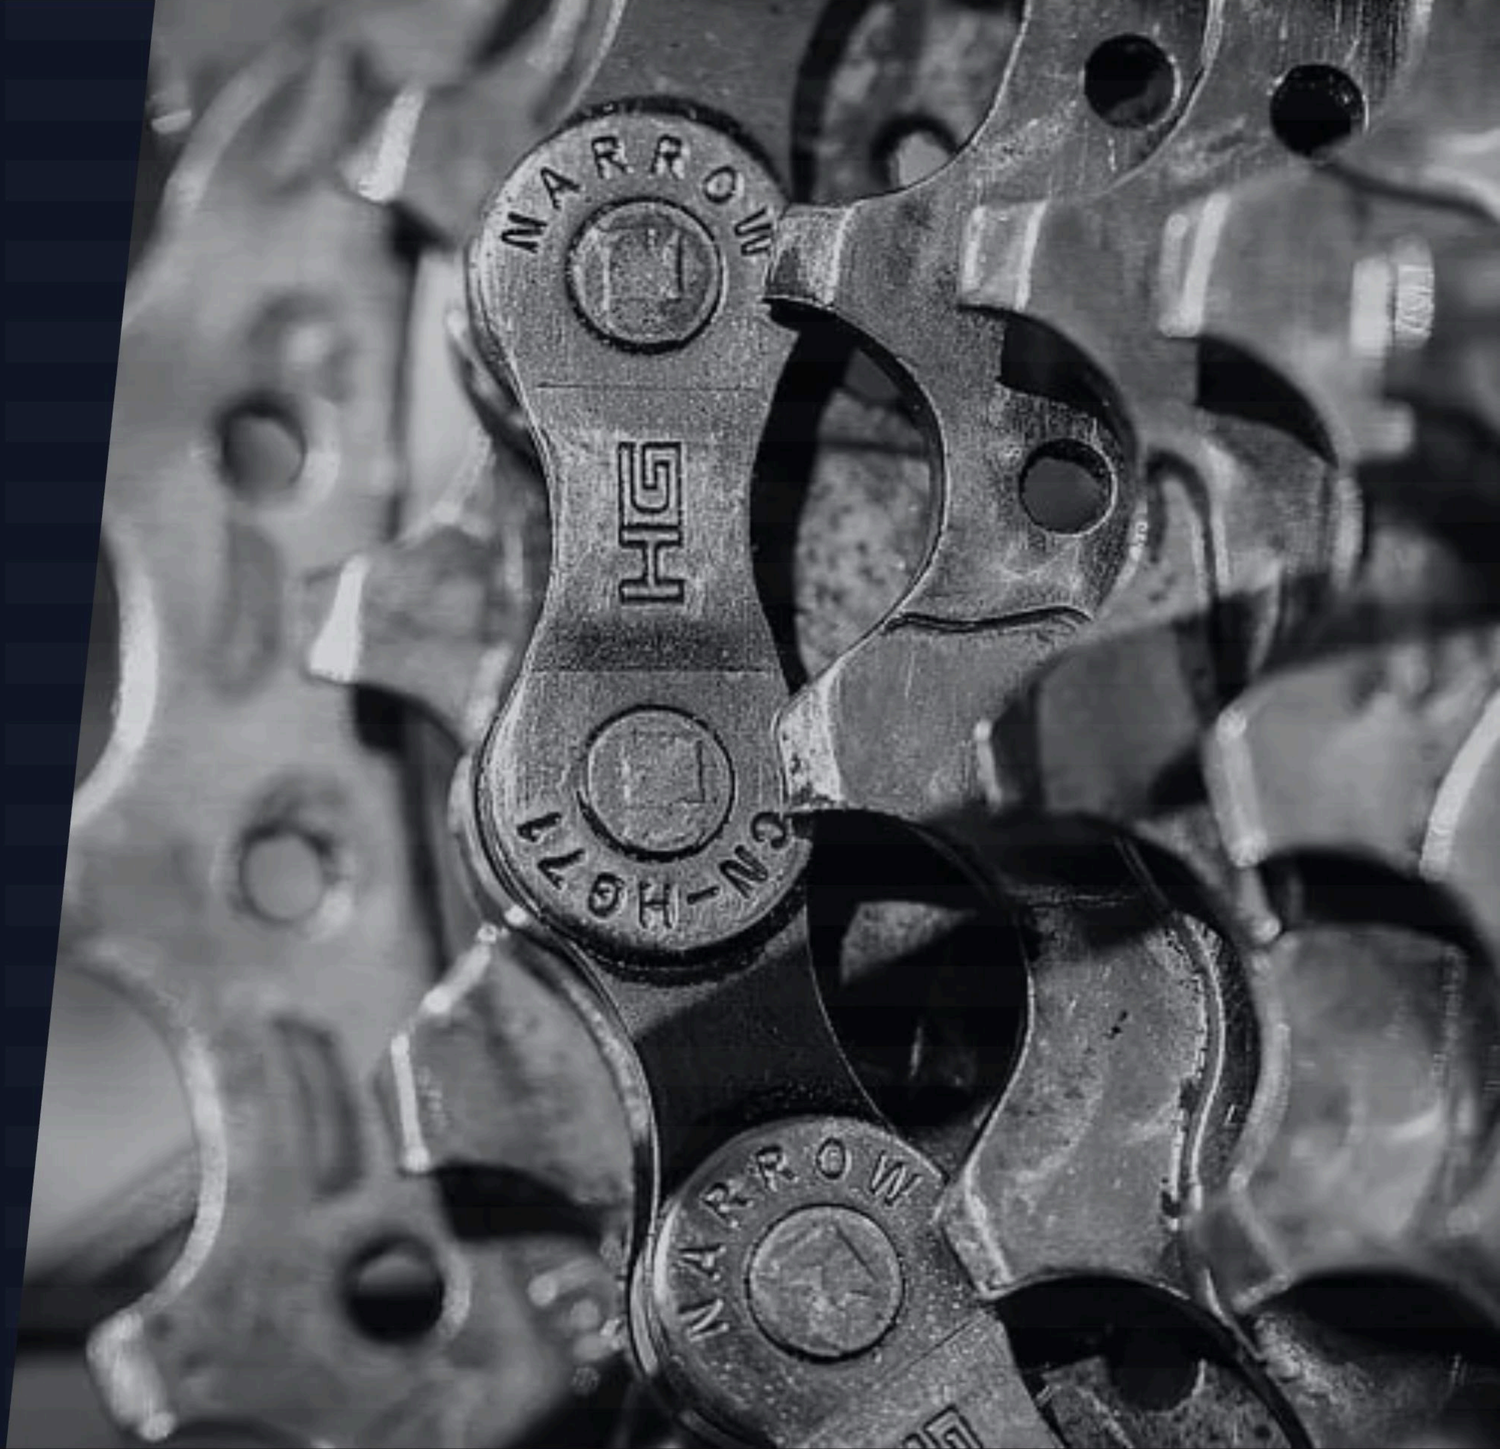
TECHNO FEEDER

BRAND IDENTITY CASE STUDY

Technology meets nourishment.



02 PROJECT OVERVIEW

CLIENT

Techno Feeder

INDUSTRY

Food Processing Machinery

TIMELINE

12 Weeks

THE CHALLENGE

To unite industrial precision with a human, food-centric purpose. The previous identity felt overly mechanical and cold, failing to communicate the ultimate value of "nourishment" provided by their advanced machinery.

THE OBJECTIVE

Create a distinctive, scalable mark that conveys both engineering strength and safe food handling. The new brand needs to stand out on factory floors while assuring quality and hygiene standards.

PROJECT SCOPE

- BRAND IDENTITY
- LOGO SYSTEM
- INDUSTRIAL APPLICATION
- SIGNAGE DESIGN
- APPAREL

THE OUTCOME

A cohesive visual system optimized for diverse industrial applications—from laser-etched stainless steel machine parts to large-scale facility signage—establishing Techno Feeder as a leader in modern food technology.

VISUALIZING THE DUALITY

PHILOSOPHY

Brand Concept & Core Meaning

TECHNOLOGY (THE MACHINE)

Represented by a gear-like, mechanical outer symbol that denotes precision, industrial strength, and manufacturing expertise. It anchors the brand in engineering reality.

FEEDER (THE SPOON)

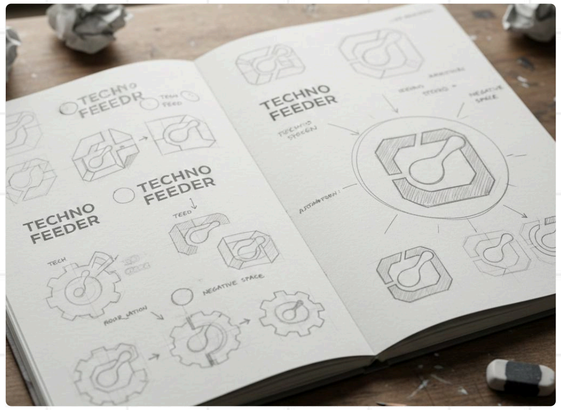
Nested within the negative space is the silhouette of a spoon. This element humanizes the brand, shifting focus from the machine to its ultimate purpose: providing nourishment.

PRIMARY PALETTE

#1F2937 #3B82F6 #FFFFFF

DESIGN PROCESS

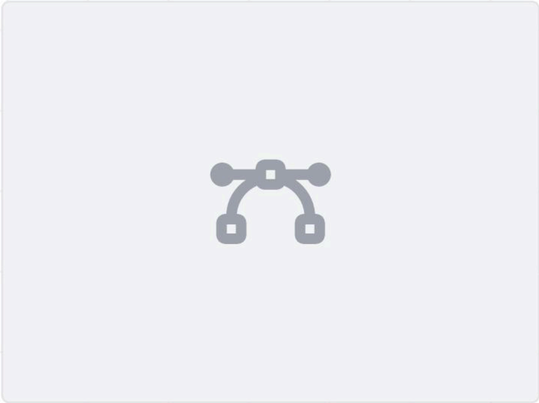
From Pencil Sketches to Final Mark



01

IDEATION & SKETCHES

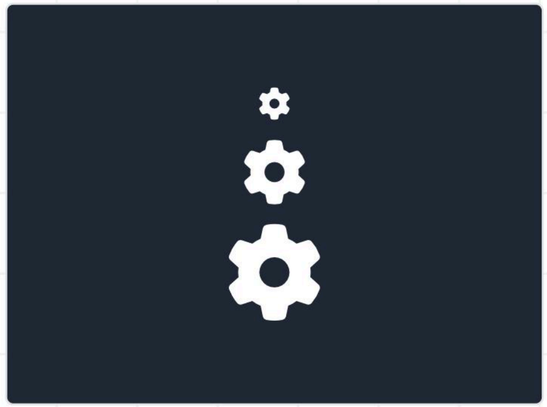
Explored spoon integration within various mechanical forms. Focused on balancing negative space to ensure the "feeder" element was discoverable yet subtle.



02

VECTOR REFINEMENT

Digitized selected sketches. Iterated on gear tooth geometry and spoon curvature to create a harmonious lockup between organic and industrial shapes.



03

SCALE & STRESS TESTS

Evaluated legibility at minimal sizes (favicon, machine etching). Adjusted stroke weights to prevent ink bleed and ensure clarity on rough textures.

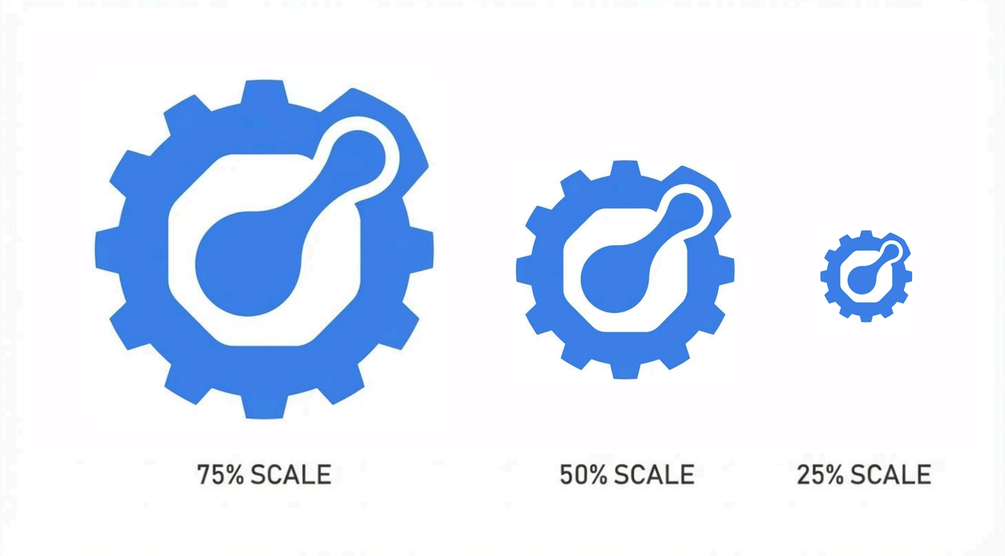
04

FINALIZATION

Locked grid geometry and spacing. Established the official "Industrial Blue" color code and defined clear space rules for consistent reproduction.

RESPONSIVE LOGO SYSTEM

Scalability & Reproduction Standards



75% Scale

PRIMARY CONFIGURATION

The full wordmark setup. Maximizes brand recognition with complete typographic details and the gear-spoon symbol in perfect balance.

50% Scale

COMPACT CONFIGURATION

Optimized for mid-range viewing. Spacing is slightly tightened, and the wordmark may be stacked or reduced depending on vertical constraints.

25% Scale

ICON / ETCHING

Symbol-only or simplified wordmark. Designed for extreme reduction where details might bleed. High contrast is prioritized.

To reflect the industrial nature of the company, the branding is implemented across diverse materials:

Laser-Etched Stainless Steel
Applied directly to the machines to signify durability and food-grade quality.

Apparel (T-shirts & Caps):
Providing a professional and cohesive look for the engineering and floor staff.

Physical Signage:
Heavy-duty boards for manufacturing facilities and corporate offices.
